

CLAIMS

1. Perfume dispenser (1) of the type comprising:
 - a container (3) containing perfume,
 - a device (2) for pumping and atomizing the perfume, the device comprising an atomizer, a pump and a tube (16) for drawing off the perfume, the tube comprising a first end (18) connected to the pump and a second end which is to be arranged in the bottom (28) of the container (3) in order to draw off the perfume, characterized in that the container (3) comprises a perforable region (34) and the second end of the tube (16) forms a member for perforating the perforable region (34).
2. Dispenser according to claim 1, characterized in that the tube (16) comprises metal, at least at its second end (20).
3. Dispenser according to claim 1 or 2, characterized in that the perforable region (34) is a disc delimited in the container (3) by a region (36) of lesser resistance.
4. Dispenser according to any one of the preceding claims, characterized in that the container (3) is composed of plastics material.
5. Dispenser according to any one of the preceding claims, characterized in that the container (3) is force-fitted in the pumping and atomizing device (2) in order to be held relative thereto.

6. Dispenser according to any one of the preceding claims, characterized in that it comprises a case (4).
7. Dispenser according to any one of the preceding claims, characterized in that the container (3) is replaceable.
8. Container for a dispenser according to any one of the preceding claims, characterized in that it contains perfume and it comprises a perforable region (34).
9. Container (3) according to claim 8, characterized in that the perforable region (34) is a disc delimited in the container (3) by a region (36) of lesser resistance.
10. Container according to claim 8 or 9, characterized in that it is composed of plastics material.
